Career Objective:

I am actively seeking a challenging career developing and re-engineering business processes as a Business Analyst. My strong background includes product management and business development skills. I am not looking for a short-term 'job.' Instead, I want to build a long-lasting, positive relationship where, working as a team, we can develop unique and valuable tools to help businesses function more efficiently.

Profile:

- Unique ability to bridge communication gaps between technical and business groups
- Comfortable with lead technical role and in mentoring and training others
- Strive to assist office workgroups in working more efficiently, saving time and money
- History of stable applications delivered to exact specifications
- Well-versed in user interface design and intuitive user control of applications

Skills Summary:

Creative system architect and team leader as well as a hands-on business analyst. Specializing in Microsoft integrated solutions and systems using their latest products. Managed technical architecture, development environment, project scheduling, production deployment, product maintenance and customer support, budget management, accurate delivery estimates, coordinating deliverables, coordinating communication between internal and external customers and engineering resources, building and managing engineering teams, and handling quality issues.

I am experienced in the design, construction, deployment, and maintenance of high-volume web interface client-server applications and consumer PC-based software applications in zero-downtime tolerant environments. Projects have included research and development, product design, business model development, architecture requirements, production management, and customer support.

Background and Capabilities:

I have proven my ability in major markets including Denver, Chicago, Dallas and Oklahoma City with public and private companies including Home Depot, Sports Authority, ProLogis, Pulte Homes, Cancer Treatment Centers of America, Coors Brewing, Colorado Farm Bureau, and Methodist Health System – Dallas.

As a trainer, I have been very successful in the process of communicating difficult subjects and concepts in a way that is tailored to the group at hand. As a designer, I can often visualize and compose entire projects from end to end when others on the team are still seeing pieces on the table.
